

Comprehensive General Knowledge Document

1. History

The Great Wall of China was constructed to protect against invasions and stretches over 13,000 miles.

Ancient Egypt was one of the most advanced civilizations, known for its pyramids and hieroglyphic writing.

World War I lasted from 1914 to 1918 and was triggered by the assassination of Archduke Franz Ferdinand.

The Renaissance was a cultural movement between the 14th and 17th centuries, leading to advancements in art, science, and literature.

The Declaration of Independence was signed in 1776, marking the beginning of the United States as a sovereign nation.

2. Science

Water boils at 100°C at sea level, but at higher altitudes, the boiling point decreases due to lower atmospheric pressure.

The human body has 206 bones, with the femur being the longest and strongest bone.

DNA (Deoxyribonucleic Acid) carries genetic instructions for all living organisms.

The periodic table consists of 118 elements, with hydrogen being the lightest and uranium among the heaviest.

Electricity is generated through renewable sources such as wind, solar, and hydroelectric power.

3. Geography

Mount Everest is the highest mountain in the world, standing at 8,848.86 meters, and is part of the Himalayas.

The Amazon Rainforest is the largest rainforest on Earth, spanning nine countries in South America.

The Sahara Desert is the largest hot desert, covering most of North Africa.

The Pacific Ocean is the largest ocean, covering more area than all the continents combined.

Greenland is the largest island in the world, though it is politically associated with Denmark.

4. Space

Jupiter is the largest planet in the solar system and has a Great Red Spot, which is a massive storm lasting centuries.

The Moon is Earth's only natural satellite, and its surface is covered with craters due to asteroid impacts.

The speed of light is approximately 299,792,458 meters per second in a vacuum.

Black holes have a gravitational pull so strong that even light cannot escape them.

NASA's Apollo 11 mission in 1969 was the first to land humans on the Moon, with Neil Armstrong being the first person to walk on its surface.

5. Technology

The internet was developed in the late 20th century and has revolutionized communication worldwide.

Artificial Intelligence (AI) is advancing rapidly, with applications in healthcare, finance, and automation.

The first smartphone was developed by IBM in 1992, called Simon Personal Communicator.

Blockchain technology enables secure and decentralized digital transactions, commonly used in cryptocurrencies.

5G technology provides faster wireless connectivity, enhancing mobile communication and IoT applications.

6. Famous Personalities

Albert Einstein formulated the theory of relativity and received the 1921 Nobel Prize in Physics.

Marie Curie was the first woman to win a Nobel Prize and is famous for her research on radioactivity.

Leonardo da Vinci was a Renaissance artist and scientist known for the Mona Lisa and advanced engineering designs.

Nelson Mandela fought against apartheid in South Africa and became its first black president in 1994.

Isaac Newton formulated the laws of motion and universal gravitation, which laid the foundation for classical mechanics.
